EDUCATION

- Vellore Institute Of Technology**
B.Tech, Computer Science: **GPA: 9.27/10**

Vellore, Tamil Nadu
August 2022 - May 2026

EXPERIENCE

- Research Intern – Samsung PRISM**, - Samsung R&D Institute, Bangalore (Remote) **July 2025 – Ongoing**
 - Developing an AI-driven tool that parses 2G telecom logs and auto-generates end-to-end call-flow diagrams aligned with 3GPP specifications.
 - Implementing NLP-based message extraction and Mermaid.js-powered interactive visualisation to speed up vRAN debugging and analysis.
- AIML Intern**, - Tech Mahindra Makers Lab, Pune, India **May 2025 – August 2025**
 - Researching **ARC-based AGI** using discrete reasoning, and experimenting with **neural networks** and **genetic algorithms** for hybrid cognitive architectures.
 - Developing **Agentic AI** workflows using **MCP (Model Context Protocol)** and **Agent-to-Agent (A2A)** communication to enable modular task coordination.
- UI/UX Intern**, - Edept, Maharashtra, India **June 2024 - August 2024**
 - Successfully designed and implemented a user-friendly skill deficit tool, enhancing user experience and functionality by utilizing UI/UX best practices and innovative design solutions.

PROJECTS

- SmartBill Manager — Automated Invoice Reader & Reminder System**
 - Built an intelligent billing system using **OCR (Tesseract)** and **LLM (Groq/Ollama)** to extract structured data (amounts, names, IDs, emails) from scanned bills or uploaded images.
 - Enabled storage and management of both paid and unpaid bills using **SQLite** as a lightweight, persistent backend database.
 - Integrated an automated email notification system to inform users of outstanding balances, streamlining financial follow-ups.
 - Implemented bill tracking UI with form-based uploads and verification options to support multi-user usage scenarios.Technologies Used: **Python, Tesseract OCR, Groq LLM, SQLite, Streamlit, smtplib (Email Automation)**
- Disease Diagnosis System with Agent-Based Orchestration**
 - Designed a multi-agent disease prediction system where an **orchestrator agent** routes input to specialized disease agents based on symptom class.
 - Each specialized agent evaluates symptoms using internal tools (e.g., **Random Forest, Naive Bayes**) and can request additional inputs before final classification.
 - Implemented modular agents with independent ML models and tool usage capabilities to support scalable diagnosis across diverse disease categories.Technologies Used: **Python, Scikit-Learn, LangChain, OpenAI API, Random Forest, Naive Bayes**
- Malaria Detection from Blood Smear Images — Deep Learning Classifier**
 - Developed an automated malaria detection system using a pre-trained **CNN model** to classify infected and uninfected blood smear images.
 - Handled a structured dataset of patient images with corresponding annotation files, implementing robust data preprocessing and augmentation to improve model accuracy.
 - Ensured correct image orientation and display using **PIL/Matplotlib** to avoid common issues with EXIF rotation flags.Technologies Used: **Python, TensorFlow/Keras, PIL, Matplotlib, OpenCV (optional), NumPy, Pandas**
- Data-Driven Discount Optimization for QuickBites**
 - Conducted exploratory data analysis on 3 segmented food delivery datasets to uncover trends in customer behavior, retention, and order patterns.
 - Proposed actionable solutions like targeted discounts, loyalty rewards, and location-based offers to enhance retention and profitability.Technologies Used: **Python, Pandas, Matplotlib, Google Colab**

SKILLS

- Programming Languages:** Python, Cpp, JavaScript
- Web Technologies:** NodeJS, Express JS, ReactJS, HTML, CSS, MySQL, ReactJs
- Machine Learning & AI:** Crew ai, Scikit-Learn, Tesseract OCR, YOLO, Agentic Ai
- Tools & Platforms:** AWS Fundamentals, Git, Streamlit, Google Colab

EXTRA CURRICULAR

- Lead Anchor, Riviera:** Commanded the stage as the lead anchor at Riviera, recognized as one of India's largest cultural festivals, captivating a live audience of **20,000**
- Events Head, Anchoring Club (Mar 2024 – Mar 2025):** Spearheaded the execution of 25+ events with an audience reach of 2000+, ensuring seamless coordination and engagement. Collaborated with 5+ student clubs to deliver cohesive, large-scale campus events.

COURSES

- Computer Networks, Operating Systems, AWS Solution Architect, Artificial Intelligence, Software Engineering, Design & Analysis of Algorithms
